

# 2024.07.17\_오후

sudo vim nginx-pod.yaml

```
apiVersion: v1
kind: Pod
metadata:
  name: nginx-pod
spec:
  containers:
  - name: container-name
    image: nginx
```

nginx image server 1 2 3에 다 보내기 scp로

**sudo crictl pull nginx**

yaml파일에서 **kubectl create -f ./nginx-pod.yaml**

// sudo systemctl daemon-reload

```
vim ~/.bashrc
source ~/.bashrc
k get pod
alias k="kubectl"
```

bashprofile 부팅할때  
bashrc는 세션읽을때

sudo nano /etc/crictl.yaml  
이것도해봄

```
runtime-endpoint: unix:///run/containerd/containerd.sock
image-endpoint: unix:///run/containerd/containerd.sock
timeout: 10
debug: false
```

kubectl get pods -o wide

하고 뜨는 web server에 ping쳐보기. 간다

nginx-pod가 올라갔다..
